

Schedule 1

Classification of Reuse	Management of Reuse
<p>No. 1</p> <p>Waste wood (board, sawdust)</p>	<ol style="list-style-type: none"> 1. Source of industrial waste: waste wood (boards, sawdust) produced by industry. However, it does not apply to those identified as hazardous industrial waste according to relevant laws and regulations. 2. Purpose of reuse: pulp and paper raw material, oil-blotting materials, wood materials, pulp admixture, fuel, organic fertilizer materials, and soil culture materials. 3. Recycling institutes shall have the following qualifications: <ol style="list-style-type: none"> (1) Main products of recycling institutes are wood products, artificial wooden boards (particle board, fiberboard or plastic plywood), activated carbon, pulp, bakelite powder, phenolic resins, carbon atoms, oil-blotting agents, paper products, organic fertilizers, culture soil, or other products, unless those reused in fuel. (2) Industries reusing waste wood in organic fertilizers shall be fertilizer producers, which shall acquire the fertilizer registration certificate issued by the relevant agricultural authority according to the Fertilizer Management Act and other relevant regulations. 4. Reuse shall conform to regulations of “Methods and Facilities Standards for the Storage, Clearance and Disposal of Industrial Waste”; for the reuse with open storage, the storage site shall be set up with drainage for collection and treatment. 5. Products for the purpose of reuse shall conform to the national standards, international standards or relevant regulations of use. Where no national standard has been established, the general construction outline specifications for public works, the construction specifications of the authority in charge, the product quality standard formulated by the industry association, or the contract standard between industries may be adopted.
