

## Annex 2

### Minimum usage rate of subscriber numbers and calculation method of the quantity to be recovered

#### I. Minimum usage rate

- (I) Mobile phone number: The minimum usage rate is 50%
- (II) Internet phone number: No minimum usage rate has been set yet.
- (III) Satellite communication number: No minimum usage rate has been set yet.
- (IV) Local line phone number: No minimum usage rate has been set yet.
- (V) Smart virtual number: No minimum usage rate has been set yet.
- (VI) IoT number: No minimum usage rate is set for those receiving allocation for the first time, and the minimum utilization rate after re-allocation is 50%.

#### II. Calculation method of the utilization rate:

Utilization rate = (Quantity of the type of prepaid + quantity of the type of postpaid + quantity of the type of outward-ported + quantity of the type leased to other providers of telecommunications services) ÷ quantity of allocated numbers × 100%  
Note: Based on the use situation on December 31 of the previous year.

#### III. Calculation method of the quantity of subscriber numbers that should be recovered

Quantity to be recovered = (Minimum utilization rate - utilization rate) ÷ minimum utilization rate × quantity of allocated numbers
